Remote (US) • Open to Relocation

SENIOR SOFTWARE ENGINEER

- More than eight years of experience delivering high value features under tight constraints with quality and reliability.
- Proven experience building reactive front-end experiences in React, React Native and backend architectures utilizing Node.js, Go, PostgreSQL and NoSQL.
- Founding engineer at a zero-to-one startup; owned applications as one of two engineers.
- Expertise in payments, e-commerce and regulated external integrations, including Stripe and reporting to a state regulator (Metrc).
- Substantial experience incorporating AI into the daily coding workflow via Claude Code and Cursor, using the latest models from Anthropic, OpenAI etc. Combines human guidance with AI efficiency to create resilient, production ready products.

TECHNICAL PROFICIENCIES

Languages, Frameworks & Data: React, Node.js, TypeScript/Javascript, PostgreSQL, Golang, Remix, NoSQL (Firebase), GraphQL, React Native

Skills & Paradigms: Object-Oriented, Functional programming, AI-Assisted Development; Relational databases, No-SQL; Project Management, Mentorship, Scrum methodology

Cloud & Infrastructure: GCP/Firebase (Cloud Functions, Storage, Tasks, Scheduler, Maps Platform), AWS (S3, Lambda, etc.), Terraform

WORK EXPERIENCE

Senior Software Engineer II

2024 – Present

Flowhub Inc.

- Full-stack development of Point-of-Sale and Ecommerce software for Flowhub, serving the cannabis industry across the United States and Jamaica.
- Built an ecommerce platform with a React Remix front-end, supported by a Go-based API, and leveraging Elasticsearch for low-latency search of products which serves tens of thousands of customers a day.
- Alongside one other engineer, launched "Pizza Style" (scheduled) and "Ice Cream Style" (ASAP) delivery verticals for E-commerce. Opened up a brand new revenue stream for Flowhub. Integrated with the state external regulator (Metrc) to report delivery inventory movements.
- Developed the Go external API for the ecommerce platform and a companion Remix storefront on top of it, validating the API design through real-world use.

Tech: Remix, React, Node.js, PostgreSQL, Golang, GraphQL, REST

Founding Engineer

2021 – 2023

Traba | Miami, FL

- First full-time engineer at Traba, a marketplace connecting workers with businesses in the light-industrial and events space.
- Helped grow the engineering team from 2 to 11 and scaled active app usage from 0 to 40,000+ users.
- Built the shift payments system, leveraging a Stripe integration, React Native, Node.js, and Firestore DB; developed a system which reliably processed payment transactions for thousands of workers per day.
- Designed and implemented the invoicing system, integrating with Stripe to generate client charge sheets - Used Node.js, Firestore DB, Stripe to develop the API, and a web based React Front-end to display the client portal.
- Owned key enhancements — automated cuts, automated late fees, invoice reminder emails (via scheduled jobs and queued tasks on GCP), and in-portal payments — reducing operations workload by tens of hours per week.
- Served as the primary point of contact for payment system questions and product development with the Operations, Sales, and Finance teams.
- Built additional user experiences across the worker-facing mobile app, business-facing web portal, and internal tooling as needed.

Tech: React Native, React, Node.js, TypeScript, Nest.js, Firestore, REST

Software Engineer III

2020 – 2021

Software Engineer II

2018 – 2020

Fanatics – Experimentation | San Mateo, CA

- Implemented new features across the Fanatics web experience, working daily in Node.js/JavaScript (React, Redux, Koa2).
- Mentored junior engineers, providing technical guidance and support in weekly one on ones for both interns and new members of the team. Worked to enable a new generation of engineers to be confident and careful in their code quality.
- Built a dynamic navigation component in React, Node.js and GraphQL leveraging a BE in Elasticsearch. Removed manual setup for business users, and co-wrote a technical blog post on the project (tinyurl.com/y7y523ss).
- Utilizing React and Node.js, developed internal tooling for business users to configure their own A/B testing configurations, which was then shared with our E-commerce front-end via a GraphQL layer.
- Refactored our React base price component for readability and reusability, enabling new price-layout testing that banked \$22M for the Experiments team.

Tech: React, Node.js, TypeScript, GraphQL

Software Engineering Intern

Summer 2017

Cadence Design Systems – Pegasus Team | San Jose, CA

- Used Python and C++ to build out infrastructure supporting Cadence's Pegasus Verification System.

Tech: Python, C++

EDUCATION

Duke University

2014 – 2018

Bachelor of Science in Computer Science, Minors in Physics and Biology | Durham, NC
